Ultraceuticals

Your skin is unique, and your skin treatment should be too. After a thorough Skin Health Consultation, your professional Skin Expert will create your bespoke Skin Journey plan to tackle concerns like dryness, dullness, the first signs of premature skin ageing, uneven skin tone, congestion, breakouts, enlarged pores and problematic skin.

With customised, innovative treatments, plus your home care plan, you can expect to enjoy radiant, healthy glowing skin in 90 days.

HydraFacial

HydraFacial, is an award winning treatment, which rejuvenates the skin with instantly visible results. This technology driven treatment follows a six-step treatment process – Detox, Cleanse and Exfoliation, Brightening, Extraction, Hydration and finally Rejuvenation. Dead skin cells and impurities are removed and the skin is hydrated with antioxidants and peptides.

HydraFacial uses advanced, patented vortex technology to deeply cleanse the skin and effectively deliver botanical ingredients.

HydraFacial also delivers powerful antioxidants to counteract damage from free radicals such as pollution, sun exposure and stress which can accelerate the ageing process.

Dermalux LED

Dermalux Tri-Wave MD is a multi-award winning, clinically proven treatment that addresses a variety of skin concerns. LED light is used to speed up the skin's natural process of rejuvenation and repair.

It is suitable for all skin types and conditions. The different lights cohere to different concerns, which your therapist will take into consideration eg. The red light has been specifically developed to have an anti-ageing and anti-inflammatory effect on the skin. It's a fantastic treatment for people with sensitive skin conditions such as psoriasis, eczema and rosacea.

The treatment alone is 20 minutes, or if added on to another treatment, 10 minutes.

Common concerns for treatment include:

- Ageing skin
- Rosacea
- Psoriasis
- Acne
- Eczema

Observ Skin Analysis

The Observ is a skin analysing machine, which allows you to see your skin up close and in depth.

The Observ can diagnose many skin conditions, such as:

- Pigmentation Disorders
- Vascular conditions
- Rosacea
- Wrinkle formation
- Skin irritation

BBL (Broadband Light) Therapy

Broadband Light (BBL) therapy is an advanced form of intense pulsed light (IPL) treatment, designed to address a myriad of skin concerns and imperfections. The technology behind BBL utilises a broad spectrum of light wavelengths, allowing it to target specific skin concerns such as pigmentation irregularities, sun damage, fine lines, and more. Unlike traditional laser treatments, BBL emits multiple wavelengths simultaneously, providing a more comprehensive approach to skin rejuvenation.

How BBL Works

The key to BBL's effectiveness lies in its ability to penetrate the skin's surface and target various skin concerns at a molecular level. The light energy is absorbed by specific pigments in the skin, such as melanin and haemoglobin, leading to the stimulation of collagen production and the elimination of unwanted pigmentation. This dual-action process not only addresses existing issues but also promotes overall skin health and vitality.

Who Can Benefit from BBL Therapy

BBL therapy is a versatile treatment suitable for a wide range of individuals seeking skin rejuvenation. It is particularly beneficial for those dealing with:

- Sun Damage
- Uneven Skin Tone
- Rosacea
- Acne

Skin Tyte

Skin Tyte

SkinTyte by Sciton is a noninvasive treatment for skin tightening that gives skin a more youthful appearance. SkinTyte uses gentle pulses of advanced infrared-light technology to heat deep dermal layers, triggering the body's natural healing process and boosting new collagen production. Coupled with the contraction of collagen fibers that are already in your skin, this increased dermal collagen results in skin tightening and improved skin firmness. The treatment works on any area of the body with mild sagging or loose skin, but popular areas for rejuvenation include the face, jawline, neck, abdomen, arms and thighs.

Moxi – A Fractional Laser Treatment

Moxi is a fractional laser treatment designed to address a spectrum of skin concerns, including pigmentation irregularities, fine lines, and overall skin texture. Developed to be gentle yet effective, Moxi stands out for its ability to deliver noticeable results with minimal downtime. The treatment is suitable for a wide range of skin types, making it an inclusive option for individuals seeking a refreshed and revitalized complexion.

The Benefits of Moxi Treatments

Pigmentation Correction

Moxi treatments excel in correcting pigmentation on issues such as sunspots, age spots, and uneven skin tone.

Fine Lines and Wrinkle Reduction

As a non-ablative laser treatment, Moxi stimulates collagen production in the skin's deeper layers.

Texture Refinement

Moxi is renowned for its ability to enhance skin texture by promoting cellular turnover.

Dynamic Duo - Moxi & BBL

Moxi and BBL (Broadband Light) Treatment

Combining Moxi treatment and BBL (Broadband Light) therapy creates a dynamic duo in the realm of advanced skincare, offering a powerhouse treatment known as the Stax treatment. Moxi, with its fractional laser technology, excels in addressing pigmentation irregularities and refining skin texture, promoting a rejuvenated and youthful appearance. Paired with BBL therapy, which utilises targeted light energy to treat vascular and pigmented lesions, this synergistic approach enhances the overall effectiveness of the treatment.

Together, Moxi and BBL work in tandem to address a comprehensive range of skin concerns, including sunspots, age spots, fine lines, and uneven skin tone. The Stax treatment harnesses the unique strengths of each modality, promoting collagen production, correcting pigmentation issues, and revitalizing the skin's texture for a transformative and harmonious outcome. This innovative combination not only maximizes results but also offers patients a comprehensive solution for achieving radiant and healthy skin.

BTL Exilis Ultra 360

The BTL Exilis Ultra 360 is a unique, non-invasive treatment that combines ultrasound and radio frequency to reduce fat and firm your skin. Therefore, the treatment is perfect for body shaping and tightening, head to toe, skin rejuvenation, and facial treatments without any downtime.

EXILIS ULTRA 360 is ideal for anyone looking for a preventative treatment or a more dramatic cosmetic improvement once they begin to notice signs of aging. It is also ideal for those looking for a solution to excess fat or skin in the specific "stubborn" area.

Commonly treated areas/conditions include:

- Loose Skin
- Local fat deposits
- Resistant fat pads
- Excessive subcutaneous fat
- Cellulite projections
- Skin laxity connected with weight fluctuation
- Jowls
- Saggy Skin
- Sagging Neck
- Love Handles
- Bingo Wings
- Thighs

Emerald Laser

The EMERALD LASER is a non-invasive and non-thermal fat loss laser that works in tune with your own body. It is the only technology in the world that has been given US FDA market clearance for overall body circumference reduction in clients up to 40 BMI.

The laser works as natural alternative for fat loss by using non-thermal, low level lasers to create a temporary pore in the fat cells, allowing the fatty liquid to seep out of the cell and be naturally flushed out through your body, all within a 30minute treatment per area.

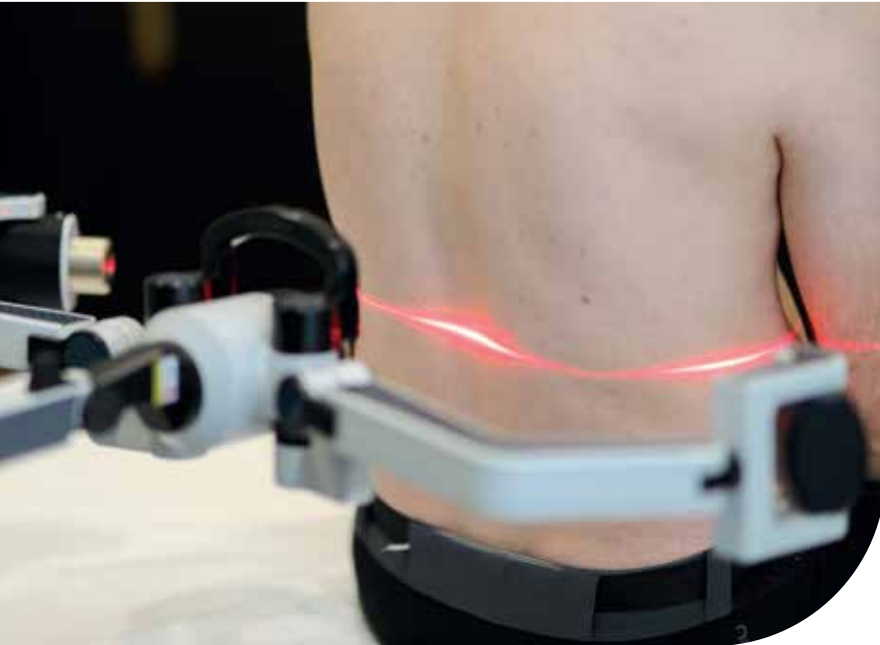

Common treatment areas include:

- Waist • Hips (muffin top) • Thighs
- Abdomen • Back

EMERALD laser can also be used on other problem areas such as the arms, neck, calves, ankles and chest. As this treatment uses low level lasers, there is no downtime required and clients can carry on with their day to day routine. EMERALD Laser results develop between 4-12 weeks as fat cells shrink down into lean, healthy tissue.

FX 635 Laser

The FX 635 LASER is the first and only laser in the world to be given FDA market clearance for the treatment of chronic low back pain, chronic neck and shoulder pain, post-operative pain and plantar fasciitis.

The FX 635 inflammation relief laser uses innovative low-level laser technology to treat pain. It is designed to reduce inflammation and pain by stimulating the muscles, ligaments and nerves.

The body absorbs the light energy, which encourages the cell's mitochondria to produce more ATP and promotes natural healing within the cell. Because the laser merely stimulates the cells to promote healing naturally, the FX 635 provides pain relief with no adverse side effects.

BTL Emsculpt Neo

EMSCUPLT NEO is the world's only non-invasive body treatment that burns fat while building muscle, within a 30 minute session. This treatment is based on an applicator simultaneously emitting synchronized RF and HIFEM+ energies. Due to the radiofrequency heating, the muscle temperature quickly raises by several degrees. This prepares muscles for exposure to stress, similar to what a warm up activity does before any workout. Bypassing the brain limitations, HIFEM+ energy contracts the muscle fibres in the area at intensities that are not achievable during voluntary workout. Extreme stress forces the muscle to adapt, resulting in an increase in the number and growth of muscle fibres and cells.

Commonly treatment areas include:

- Abdomen
- Biceps
- Front & back of Thighs
- Bum
- Triceps
- Calves

BTL Emtone

BTL Emtone is a device led to treat cellulite.

Emtone employs the clinically-proven technologies of radio frequency (RF) and targeted pressure energy in a hand-held, clinic device. Both these technologies are proven to increase the production of collagen, which increases the skin's elasticity. With a controlled temperature application, the amount of fatty deposits in any affected area are reduced. The pressure on the connective strands means that the fibrous structures relax and reduce the underlying tension in the skin, which create that dimpled effect.

Commonly treated areas;

- Buttocks
- Front of thighs
- Back of thighs
- Abdome
- Flanks

BTL Emsella

The BTL EMSELLA chair is a revolutionary, non-invasive and comfortable physiotherapy treatment for:

- Men and women suffering from urinary incontinence
- Mothers with stress incontinence following childbirth
- Women with decreased sexual satisfaction

The pelvic floor muscles support the pelvic floor organs and control continence. However, natural body aging, childbirth and menopause can cause this group of muscles to decondition resulting in continence problems such as leaking urine when coughing or sneezing.

The BTL EMSELLA treatment uses HIFEM Technology to stimulate and strengthen all the

pelvic floor muscles, not just the subset that can be exercised with voluntary contractions (Kegel exercises).

These stronger pelvic floor muscles restore continence and the confidence to enjoy normal daily activities without fear of losing bladder control.

During each 28-minute session you sit comfortably on the Emsella chair while it generates thousands of supramaximal pelvic floor muscle contractions. Each session is equivalent to doing 11,000 pelvic floor exercises.

The procedure is non-invasive, and you remain fully clothed throughout. With no recovery time needed you can leave immediately after each session and resume normal daily activity.

BTL Lymphastim

The BTL Lymphastim is a clinically-proven non-invasive system that enhances lymphatic drainage and boosts circulation, promoting smoother, less dimpled skin. Lymphatic drainage, is a relaxing treatment that involves the application of air pressure, alternating between compression and decompression on parts of the body.

A lymphatic drainage massage can help speed up your body's natural way of getting rid of toxins by gently pushing fluid to the lymph channels through a controlled and targeted technique. Pressure is applied with the specialised device and has both cosmetic and medical uses.

Commonly used for:

- Anti-cellulite treatment
- Body contouring
- 'Heavy leg' syndrome
- Skin elasticity improvement
- After liposuction care
- Enhancement for other treatments

Laser Hair Removal

Laser hair removal is a safe and effective method to successfully removing unwanted face and body hair, on a permanent basis, using medical grade lasers. The melanin (pigment) in the hair follicle absorbs the light emitted by the laser. The energy from the laser's light, heats the pigment, and therefore destroys the hair follicle. Once that follicle is destroyed, it can never grow back.

Commonly treated areas for men and women include:

- Legs
- Underarms
- Chest
- Stomach
- Hands & Feet
- Bikini
- Forearms
- Back
- Face

The Cynosure Elite IQ uses two wavelengths (alexandrite and Nd:Yag) making it safe and accessible for all skin types. This laser offers faster results than the standard laser hair removal treatment, with permanent results seen within 6-10 treatments. It eliminates the need for shaving, waxing, tweezing, sugaring, epilating etc.

Tattoo Removal

The PicoSure Pro device delivers 755nm energy in picoseconds; the delivery is so quick that it spares the skin from high thermal damage while optimally targeting unwanted pigment, wrinkles, acne scars and pores with less downtime than traditional lasers.

The PicoSure Pro laser makes tattoo removal even easier. The 755nm wavelength is able to target black, blue, and green tattoo inks, while the optional 532nm wavelength offers effective treatment of “sunset colors”—red, yellow and orange—which are typically hard to correct.

The PicoSure Pro is also used to:

- Remove unwanted pigment safely and effectively in all skin types; the only picosecond device FDA-cleared to treat melasma pigment
- Reduce wrinkles, fine lines, acne scars and pore size with no downtime
- Improve overall skin tone & texture; providing patients with lighter, brighter and more radiant complexion

Skinpen Microneedling

SkinPen microneedling is a revolutionary treatment that can transform the appearance of your skin. Using a handheld device with tiny needles, SkinPen creates controlled micro-injuries to stimulate the skin's natural healing process. This stimulates collagen production, resulting in smoother, firmer, and more youthful-looking skin.

SkinPen microneedling is a versatile treatment that can address various skin concerns such as fine lines, wrinkles, acne scars, hyperpigmentation, and uneven texture. It is safe for all skin types and can be used on the face, neck, décolletage, and other areas of the body. With minimal downtime and noticeable results, SkinPen microneedling is an excellent option for anyone looking to rejuvenate and improve the overall health of their skin.

Skin Tag Removal

Cryosthetics skin tag removal is a cutting-edge treatment that offers a quick and effective solution for removing unwanted skin tags, and warts. Using the power of freezing temperatures, cryosthetics targets the specific area where the skin tag is located, causing it to freeze and ultimately fall off. This non-invasive procedure is performed by trained professionals who apply liquid nitrogen or another cryogenic substance directly to the skin tag. The freezing process destroys the cells within the skin tag, leading to its safe and efficient removal. Cryosthetics skin tag removal is considered a safe and relatively painless procedure, with minimal downtime. Whether you have a single skin tag or multiple ones, this innovative technique can help you achieve smoother and clearer skin. Consult with a certified cryosthetics specialist to explore this highly successful treatment option.

Coolift Facial

Coolift facial is a state-of-the-art beauty treatment that utilizes cutting-edge technology to rejuvenate and revitalize the skin. This non-invasive procedure involves the use of a handheld device that delivers a powerful stream of concentrated CO2 gas to the facial area. The pressurized CO2 gas stimulates microcirculation, promoting the delivery of oxygen and nutrients to the skin cells. This, in turn, helps to improve collagen and elastin production, resulting in firmer, smoother, and more youthful-looking skin. The Coolift facial also helps to tighten pores, reduce fine lines and wrinkles, and improve overall skin texture. The treatment is quick, painless, and requires no downtime, making it a popular choice for those seeking instant results. Whether you have a special event coming up or simply want to pamper yourself, the Coolift facial can leave you with a fresh, glowing complexion that will turn heads everywhere you go.

Picosure Pro Facial

PicoSure Pro facial is a revolutionary skincare treatment that harnesses the power of advanced laser technology to rejuvenate and transform the skin. Using ultra-short pulses of laser energy, PicoSure Pro targets and breaks down unwanted pigmentation, such as age spots, sunspots, and freckles, while stimulating collagen and elastin production. This results in a more even skin tone, improved texture, and reduced appearance of wrinkles and fine lines. The treatment is safe for all skin types and requires minimal downtime, making it a convenient option for those with busy schedules. PicoSure Pro facial is also effective in treating acne scars, reducing the size of pores, and promoting a smoother overall complexion. Whether you're looking to address specific skin concerns or simply want to achieve a refreshed and youthful appearance, PicoSure Pro facial can help you achieve your skincare goals.

Dermaplane Facial

Dermaplaning facial is a popular exfoliating treatment that involves the use of a sterile surgical scalpel to gently remove dead skin cells and peach fuzz from the surface of the skin. This non-invasive procedure helps to reveal a smoother, brighter complexion by effectively eliminating buildup and allowing skincare products to penetrate more deeply. The result is a refreshed and rejuvenated appearance, with improved skin texture and a more even skin tone. Dermaplaning is suitable for all skin types and has minimal downtime, making it a popular choice for those seeking instant results. If you're looking to achieve a radiant and glowing complexion, a dermaplaning facial might be the perfect solution for you.

Thread Vein Removal

Cynosure Elite IQ is a state-of-the-art laser platform that offers effective and efficient thread vein removal treatment. With the use of advanced laser technology, this innovative system targets and destroys the blood vessels responsible for thread veins, resulting in their visible disappearance. Unlike traditional treatment methods that may involve injections or surgery, Cynosure Elite IQ provides a non-invasive solution that requires no downtime. Its quick treatment sessions make it a convenient option for those looking to say goodbye to unsightly thread veins. Whether you're dealing with spider veins, telangiectasias, or other vascular lesions, Cynosure Elite IQ can help you regain your confidence and achieve smoother, clearer skin.
